

Abstract of the Disclosure

To provide an image delivery system which allows users to previously check their video images that have
5 been obtained at leisure facilities, such as theme parks and aquariums, and megastores, and which also allows the users to edit the images so as to comply with their preferences. The system, being interconnected with a user terminal via an communications network, includes: means
10 for storing a master file that records video images of plural users substantially continuously; means for storing link information linking a plurality of parts of the master file with the respective users; and means, responsive to the receipt of an file delivery request of a user from
15 a user terminal, for reading out a corresponding one of the plural parts of the master file, in which part the user appears, and delivering the read-out part to the terminal through the communications network.
